

PUBLIC NOTICE

Within the next few weeks, Lawrence Livermore National Laboratory will begin the annual burn at Site 300. As in past years, this will involve carefully burning along the fence line and parts of the Site 300 interior area under controlled conditions to help prevent wildfires from spreading to or from the site.

The burn schedule is heavily dependent on appropriate weather conditions, which are confirmed by air meteorologists on the day of a planned burn. Site 300 neighbors identified in the burn plan will be notified by telephone when a burn will take place.

The Site 300 annual burn plan can be found in documents recently placed in the LLNL Environmental Repositories at the Tracy Public Library and the LLNL Discovery Center, located at East Gate Drive off Greenville Road in Livermore. These documents are the Prescribed Burning Smoke Management Plan at Lawrence Livermore National Laboratory Site 300 and the Lawrence Livermore National Laboratory Site 300 Explosive Test Facility Prescribed Burn/Smoke Management Plan.

These documents are also posted on the LLNL web site <http://www-envirinfo.llnl.gov/>.

If you would like to receive paper copies of these documents, or have any questions, you may contact Scott Wilson at LLNL at 925-423-3125 or wilson101@llnl.gov.
